Who Writes the Check to the Government Does Matter: Evidence from Firm-to-Firm Links

This paper tests whether a change in the responsibility to remit Value Added Tax (VAT) causes a real response among firms, exploiting a quasi-experimental design and administrative data on firm-to-firm links from Italy. Analyzing confidential data for nearly 100,000 firms, I present two main findings. First, losing the responsibility to remit VAT creates a large increase in the credit position vis-vis the tax authority among treated firms. The reform increases the proportion of firms that report a tax credit at the end of the year by 6 percentage points, a 10 percent increase. Second, I find that firms are more likely to stop dealing with their clients that are subject to the remittance regime. After the reform, firm-to-firm transactions subject to VAT withholding are 5 percentage points more likely to be severed, compared to links not affected by the reform. This paper provides empirical evidence against the canonical proposition that remittance responsibility is irrelevant to the consequences of a tax and describes the behavioral response of firms.
